

ABSTRACT OF THE DISCLOSURE**CHIP-SCALE WDM SYSTEM USING GRATING-OUTCOUPLED SURFACE-
EMITTING LASERS**

5

10 A surface emitting semiconductor laser system having an outcoupling aperture on a
central waveguide. At either end of the central waveguide are means for reflecting a plurality of
different wavelengths of light such that multiple wavelengths are outcoupled through a single
outcoupling aperture. Means are provided by which the different wavelengths can be
independently modulated.
